

March 3, 2025

To the United States Armed Forces,

I am writing to formally request immediate attention and intervention regarding an ongoing, unlawful use of military-grade surveillance and psychological warfare technology within Pasco County, Florida. Specifically, I wish to highlight the Pasco County Sheriff's Office's recently ordered cessation of its predictive policing program by federal courts and the alarming indications that elements within the local law enforcement community have circumvented this order.

It has come to my attention that police login credentials have been leaked—primarily to children of law enforcement officers in high school and college—leading to the potential duplication or reconstruction of a similar system. The implications of this are grave. It suggests a rogue network of individuals with unauthorized access to law enforcement surveillance, intelligence, and predictive analytics, possibly operating outside the bounds of U.S. law.

Furthermore, over 100 individuals in Zephyrhills, Florida, including myself, have been subjected to the effects of advanced military communication technology. This technology forcibly dictates individuals' actions through the use of directed energy weapons (DEWs), a system that appears to be a continuation of the predictive policing program. Women are particularly vulnerable, as this technology has been reported to induce menstrual cycles that will not stop until death. The presence of a covert psychological operations (PsyOps) campaign aimed at individuals like myself—who have been wronged by law enforcement, are under investigation, or speak out against government corruption—is an undeniable reality.

I have been under investigation by the Florida State Attorney's Office since March 22, 2021. During this time, I have encountered numerous individuals who exhibit inexplicable knowledge of my personal history, movements, and private conversations—information they could not possibly know by conventional means. My daily interactions appear to follow an orchestrated pattern designed to steer my life toward wrongful incarceration or death. If I attempt to deviate from this preordained trajectory, the sequence of events resets, repeating itself in a manner reminiscent of psychological warfare and mind control techniques.

Moreover, I have uncovered significant evidence that these tactics are not isolated to my case. Every parent in the past 40 years whose child has been unlawfully removed from their custody has, in some form, been subjected to similar forms of monitoring, harassment, and systemic exploitation. Zephyrhills, Florida, a self-proclaimed "retirement city," is operating as a hub for human trafficking, facilitated through local government structures for monetary gain.

I am not alone in my experiences. Multiple individuals have expressed similar concerns to me. Whether this is the predictive policing system repurposed or an entirely separate, classified program, I cannot say with certainty. However, I receive constant covert communications that provide future event predictions with near-perfect accuracy—sometimes within minutes, sometimes spanning years. These correspondences, along with the coordinated harassment

tactics, indicate a level of organization and technological sophistication beyond conventional law enforcement capabilities.

As a former Pasco County Public Works First Responder (Employee ID #12403), I was never granted access to such technology, yet I have been made aware of its functions by young individuals (ages 16–26), who describe it as a game-like display with real-world applications.

Despite my persistent efforts to report these concerns to local law enforcement and the FBI, my warnings have been met with silence. I have documented and predicted major events—including an attempt on my children's lives, an attempt on my life, my wrongful incarceration, and the suspicious death of my children's mother, Christina Renee Hills, while I was incarcerated. All of these events were reported to federal authorities before and after they transpired, spanning a three-year period. The only response I have received from the FBI was a referral to a suicide prevention hotline.

This situation constitutes a direct attack on the United States, as it is being used to enslave citizens, abduct children, and facilitate human trafficking of entire family units for financial gain. The implications of a compromised law enforcement body utilizing military-grade technology against its own citizens cannot be overstated.

I urge the Armed Forces, the Department of Defense, and any relevant national security agencies to investigate these claims and take immediate action to dismantle this unauthorized network of surveillance and psychological warfare. This is not merely a local issue—it is a matter of national security, human rights, and constitutional integrity.

Please forward this message to any department, agency, or authority capable of assisting in this matter. Our nation cannot allow such abuse of power to persist unchecked.

Sincerely,

Matthew Aaron Davis
